LIMITS

1	2	3	4	5	6	7	8	9
---	---	---	---	---	---	---	---	---

One team is team Lower Limit, the other is team Upper Limit. The first team puts a marker on a limit, then the other puts a marker on any other limit (you can't use the same one), and covers the area (value of the integral) for the given function. Then the first team moves either marker to any number and covers the area. Play continues until one team gets four in a row.
